Highlights

Active 3D technology
Be enthralled by 3D movies in your own living room with Active 3D technology. Enjoy real-life depth and stunning Full HD resolution thanks to the combination of the ultra-fast display and Active shutter glasses.

3D and Full HD 3D ready TV
These active 3D glasses will give you the Full HD 3D experience on all Active 3D TVs as well as on earlier Full HD 3D ready TVs.

3D Two-Player Full Screen
With these 3D active glasses, your TV can deliver the ultimate Two-Player Full-Screen Gaming experience. In 2D two-player games, each gamer usually sees his game on half of the screen. Using 3D technology, each player can now enjoy the game in full screen at the same time, with just a click of a button on the glasses.

Flexible and Lightweight
With the design choice of lightweight and flexible materials they will feel so comfortable, you wouldn't think you were wearing any glasses.

Protective pouch
A protective pouch is provided for easy and convenient storage of the glasses when they are not in use.

High-contrast lenses
Regular active 3D glasses with polarising filters are slightly dark even when light passes through. With these high-contrast lenses, your total 3D experience will be enhanced and more enjoyable.

* Health Warning:
* If you or your family has a history of epilepsy or photosensitive seizures, consult a medical professional before exposing yourself to flashing light sources, rapid image sequences or 3D viewing.
* To avoid discomfort such as dizziness, headache or disorientation, we recommend not watching 3D for extended periods of time. If you experience any discomfort, stop watching 3D and do not immediately engage in any potentially hazardous activity until you symptoms have disappeared.
* Parents should monitor their children during 3D viewing and ensure they do not experience any discomfort as mentioned above. Watching 3D is not recommended for children under 6 years of age as their visual system is not fully developed yet.
* Do not use the 3D glasses for any purpose other than watching 3D TV.
* CHOKING HAZARD - Do not let children under 3 years of age play with the 3D glasses; they could choke on the battery lid or battery.
